

Persistence safeguard reduces high-pollution point error

High-pollution errors use the fixed final-train Q90 subset: PM10 > 54.85 ug/m3 (n=636); full-test panels show differences relative to M3.

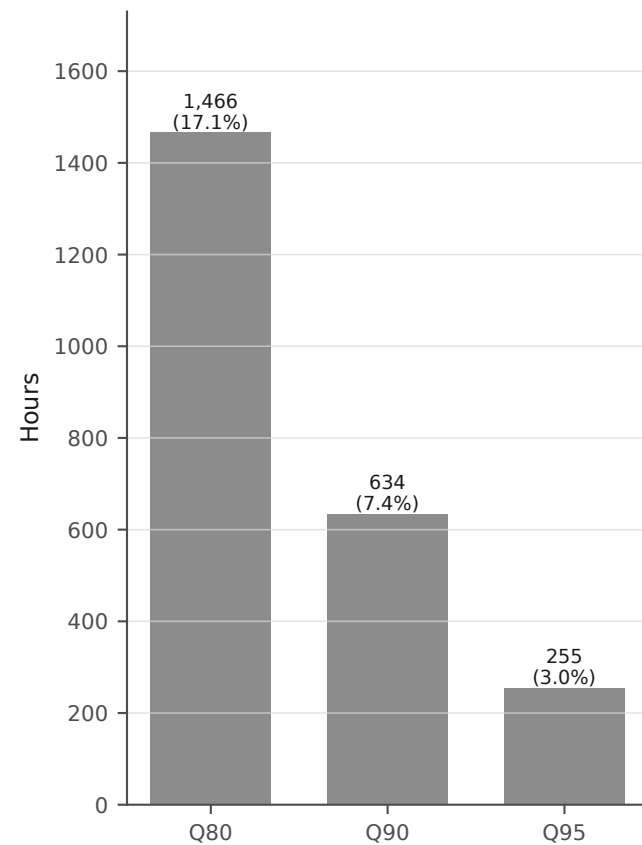

A. High-pollution MAE

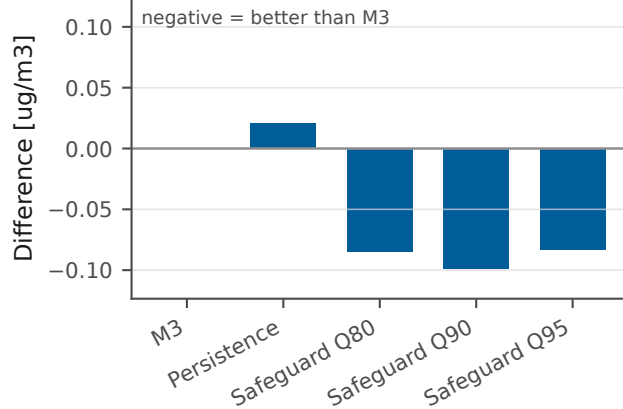

B. High-pollution RMSE

C. Activations (of 8,565 test hours)

D. Full-test MAE difference vs M3

E. Full-test RMSE difference vs M3
